

iPhone OS 3.0 beta 4 software release - Pre-Installation Advisory

iPhone OS 3.0 SDK and iPhone OS 3.0 beta 4 software release for Mac OS X v10.5.6

Introduction

As a participant in the iPhone Developer Standard or Enterprise Program we are pleased to offer you access to pre-release versions of iPhone SDK and iPhone OS 3.0.

The use of this pre-release software is governed by the Confidentiality agreement covered in your Registered iPhone Developer Terms and Conditions with Apple and any information Apple collects is subject to the terms of our privacy policy.

Pre-release software is Apple confidential information. Your unauthorized distribution of pre-release software or disclosure of information relating to pre-release software (including the posting of screen shots) may subject you to both civil and criminal liability and result in immediate termination of your iPhone Developer Program Membership.

View iPhone SDK Read Me and Release Notes before developing with the new versions of the iPhone OS and SDK.

Advisories

NOTE: iPhone SDK will only run on Intel-based Macs running Mac OS X v10.5.6 and later.

- **Install iTunes 8.2 pre-release.** You must download and install iTunes 8.2 pre-release in order to install and activate iPhone OS 3.0 beta 4 on your iPhone or iPod touch. iTunes 8.2 pre-release seed is being provided solely for the purpose of installing iPhone OS 3.0 beta 4 on your Apple devices. The use of this pre-release software is governed by the same non-disclosure agreement covered in your Registered iPhone Developer Terms and Conditions with Apple. iTunes 8.2 pre-release software is for development and testing purposes only and therefore should not be used with any existing iTunes libraries on your system.

Warning: Pre-release software is Apple confidential information. Your unauthorized distribution of pre-release software or disclosure of information relating to pre-release software (including the posting of screen shots) may

subject you to both civil and criminal liability and result in immediate termination of your iPhone Developer Program Membership

- **Updating devices to iPhone OS 3.0 beta software.** This beta version of iPhone OS 3.0 should only be deployed on devices dedicated for iPhone OS 3.0 beta software development. **By installing iPhone OS 3.0 beta software on your Authorized Test Devices, these Devices are permanently “locked” into testing mode and cannot be restored to an earlier release of iPhone OS.** Bear this in mind before installing the beta software. Devices will be able to continue to upgrade forward to future beta releases and the GM version of iPhone OS 3.0.

- **Apple Push Notification service and In App Purchasing:** You can begin developing with these APIs immediately. The Apple Push Notification service guide provides detailed technical information on how to make the most of push services for your app. You'll also find detailed technical information on developing for In App Purchasing with the Store Kit reference guide.

Team Agents can now log in to the iPhone Developer Program Portal and proceed to the App ID section to create the components necessary to enable and test applications using the Apple Push Notification service.

- **App Store.** Applications developed using iPhone OS 3.0 beta software can not be submitted to the App Store.
- **Upgrade your Mac with Software Update.** If you have not already done so, you must first upgrade your Mac system to Mac OS X v10.5.6 or later before installing and developing with the latest versions of the iPhone OS and SDK. To upgrade your Mac go to System Preferences and select Software Update to install the latest version.
- **Activate Cellular Service with Carrier.** Development on iPhone requires activation with your carrier network. Please activate your device prior to installing iPhone OS 3.0 beta software. If your device has not been activated, you may not be able to do so after you have installed iPhone OS 3.0 beta software. If you do not have a carrier network in your region or do not require access to iPhone features (camera, GPS, phone), iPod touch can be used for development and testing.
- **Check Your Data Plan.** If you are using a SIM card from another cellular account, we recommend you call your Carrier to verify the account has an unlimited data plan to prevent unanticipated charges.
